

INTERIOR ANT TREATMENT

Interior Spray Client Preparation Form

In order to ensure we deliver the most effective treatment possible, we ask you to please follow the instructions outlined in this sheet. Following these steps will ensure our technicians are able to perform safe and effective treatments to fully eliminate the pests at hand.

HOW TO PREPARE FOR THE SERVICE

Furniture/ Personal Belongings

- Please move all furniture away from baseboards at least 30 cm
- If furniture is too large or heavy to move, please leave it where it is
- Please move all personal belongings away from baseboards at least 30 cm

Kitchen

- Ensure there is no potential food or water sources available for ants
- Seal all exposed food in containers
- Clean surfaces of all spills or food traces
- Ensure all Kitchen garbage is removed
- Clean all dishes and sink of any food debris

Vacuum

Please ensure the following surfaces are vacuumed:

- rugs and carpets
- all upholstered furniture

Discard vacuum bag or empty vacuum canister immediately after completing.

ALLERGEN NOTIFICATION

Our products for controlling ants may contain allergens. Please inform your technician or the office if there are any concerns with allergens in your household prior to your appointment.

AFTER THE TREATMENT

The ant interior spray treatment **will only remain effective** if the following after treatment steps are taken and followed in your residence once the treatment is complete:

- **DO NOT** use other pest control chemicals or cleaning products near the treated areas, this will greatly decrease the effectiveness of the treatment or may entirely eliminate the treatment.
- **Remove all food sources.** This means you must keep all food in tightly sealed containers, clean up any spills, remove trash on a regular basis from the property.

REMINDER

It is **mandatory for you and your pets to leave your home during** the treatment and **for 4 hours after** the treatment has concluded. Fish aquariums may be left on site. however they should be covered and air filters must be disconnected. Persons with underlying existing health conditions should consult their family physician where they have concerns regarding re-entry time.

- Upon re-entry, please open windows for **20 minutes** to allow for proper ventilation to the treated rooms.
- Please be patient, this treatment will **REDUCE ant activity** to very low levels within approximately 2-4 weeks leading to elimination.

WHAT TO EXPECT FROM THE TREATMENT

Your technician will use a variety of methods to control the pest depending on the activity you are experiencing in your home. The primary method will be to focus in and around the kitchen appliances, and in the areas where the infestation has been detected. Your technician will be using a

formulation that is strategically applied to each site of ant activity. This the most efficient and effective way of controlling ants, and should normally only require one treatment once the spray has been completed. All treatments are completed with your safety in mind to ensure everything is completed in the safest methods available.
