

EXTERIOR INSECT TREATMENT

Exterior Treatment Client Preparation Form

In order to ensure we deliver the most effective treatment possible, we ask you to please follow the instructions outlined in this sheet. Following these steps will ensure our technicians are able to perform safe and effective treatments to fully eliminate the pests at hand.

HOW TO PREPARE FOR THE SERVICE

Keep Pets Inside

Please have all pets inside the home while the technician is working outside and for a minimum of 1 hour afterwards. We always review all products and ensure we are using the safest available to us. However, some products may cause irritation for your pets so please have them indoors.

Exterior Preparation

To aid in the effectiveness of your exterior insect treatment, please move any items 30 cm away from the foundation of your home. This will allow our technician to properly spray the exterior to prevent / eliminate pest activity. Please move all planters, patio furniture, etc. Do not attempt to move anything that is too heavy or unsafe to do so. Please also clear any moist or dark areas of debris. Such areas include: rock beds, garden beds, window wells, patio corners, etc.

Identify areas of activity

If you have particular areas of concern you would like addressed, please notify our technician at the time of service or the office prior to your appointment. If you are unsure, our technician will complete a thorough property inspection to identify all activity and treat accordingly.

ALLERGEN NOTIFICATION

Our products for controlling ants may contain allergens. Please inform your technician or the office if there are any concerns with allergens in your household prior to your appointment.

AFTER THE TREATMENT

The exterior insect spray treatment **will only remain effective** if the following after treatment steps are taken and followed in your residence once the treatment is complete:

- **DO NOT** use other pest control chemicals or cleaning products near the treated areas, this will greatly decrease the effectiveness of the treatment or may entirely eliminate the treatment.
- **DO NOT** water plants or any other areas that were treated for a **MINIMUM** of 4 hours once treatment is complete.

REMINDER

It is **NOT MANDATORY** for you or your pets to leave during this service. However, we ask you please keep all pets and people while the service is being completed.

- Please be patient, this treatment will **REDUCE insect activity** to very low levels within approximately 2 weeks leading to elimination.

WHAT TO EXPECT FROM THE TREATMENT

Your technician will use a variety of methods to control pests depending on the activity you are experiencing at your home. The primary method will be to complete an exterior foundation spray and to spot treat as needed. Your technician will be using a formulation that is strategically applied

to each site of ant activity. This the most efficient and effective way of controlling exterior insects, and should normally reduce insect activity within 2 weeks. If you continue to see pests after this period, please call us. All treatments are completed with your safety in mind to ensure everything is completed in the safest methods available.

QUESTIONS?

Give us a call or email and we will be happy to answer any additional questions regarding your preparation for service.
